**CAREER CRAFTER**

**ABSTRACT:**

The youth of this generation attempt for so many interviews but struggle to find the right source that helps them guide towards the questions, patterns etc. Each company has its own ornamentation which makes them confusing. For this they search for an easy and efficient solution. This project introduces a versatile app for software interview preparation. It features problem topics, difficulty levels, and company-specific questions, each with code and video solutions. Additional sections cover HR questions, data science, aptitude, resume templates, company principles, interview etiquette, and a community for discussion. The app provides a holistic approach to empower students for successful software interviews.

**DESCRIPTION:**

The career crafter is possible to make the dream of every student come true it helps in providing the useful and very appropriate answer towards the questions and doubts of all the students appearing for the interview. They can easily segregate the questions asked from different companies which saves so much of their time and helps them being focused. Moreover the community group can help them take feedback and also put suggestions to others and helping them with the app. With more than 300 question from various companies makes this app more efficient and upreaching.

**CONCLUSION:**

To sum up, my app is a comprehensive tool for students preparing for software interviews. It covers various topics, difficulty levels, and company-specific questions, providing solutions in code and video formats. The app addresses technical and soft skills, including data science, aptitude, resume building, company principles, interview etiquette, and a community forum for discussion. I believe this app will be a valuable resource for students aspiring to succeed in software interviews and beyond.
